

## High Pressure Filter

### Pi 420

Nominal pressure 400 bar (5690 psi), nominal size up to 450  
optional with reverse flow valve

#### 1. Features

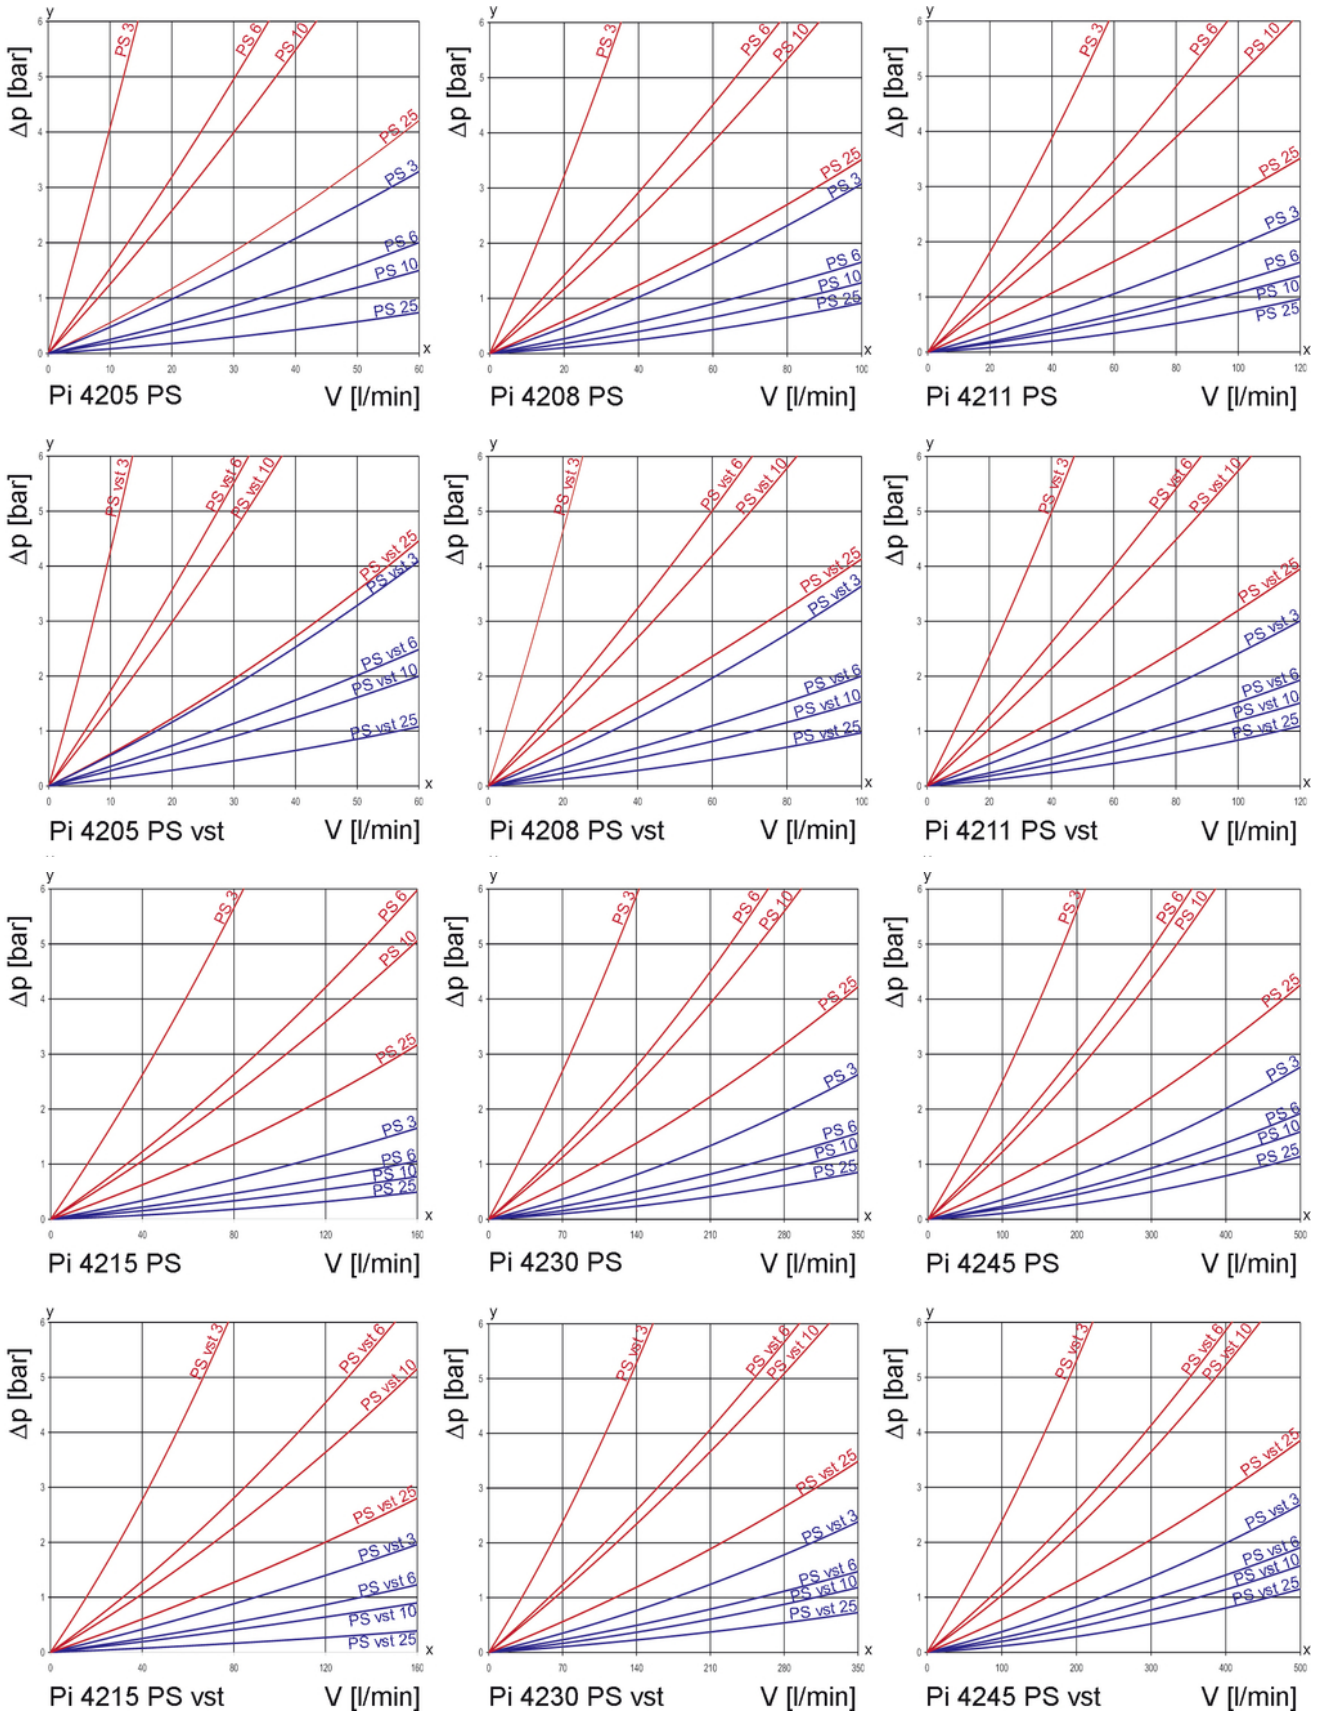

##### High performance filters for modern hydraulic systems

- Modular system
- Compact design
- Minimal pressure drop through optimal flow design
- Visual/electrical/electronic maintenance indicator
- Threaded or flanged connections
- Equipped with highly efficient glass fibre PS filter elements
- Beta rated elements according to ISO 16889 multipass test
- Elements with high differential pressure stability and dirt holding capacity
- NPT- and SAE-connections on request
- Worldwide distribution

## 2. Flow rate/pressure drop curve (filter housing incl. element)

190 mm<sup>2</sup>/s  
33 mm<sup>2</sup>/s

y = differential pressure  $\Delta p$  [bar]  
x = flow rate V [l/min]

### 3. Separation grade characteristics

y = beta-value  
x = particle-size [ $\mu\text{m}$ ]

determined by multipass tests (ISO 16889)  
calibration according to ISO 11171 (NIST)

### 4. Filter performance data

tested according to ISO 16889 (multipass test)

PS elements with  
max.  $\Delta p$  20 bar

PS 3  $\beta_{5(C)} \geq 200$   
PS 6  $\beta_{7(C)} \geq 200$   
PS 10  $\beta_{10(C)} \geq 200$   
PS 25  $\beta_{20(C)} \geq 200$

values guaranteed up to  
10 bar differential pressure

PS vst elements with  
max.  $\Delta p$  210 bar

PS vst 3  $\beta_{5(C)} \geq 200$   
PS vst 6  $\beta_{7(C)} \geq 200$   
PS vst 10  $\beta_{10(C)} \geq 200$   
PS vst 25  $\beta_{20(C)} \geq 200$

values guaranteed up to  
20 bar differential pressure

### 5. Quality assurance

FGC filters and filter elements are produced according to the following international standards:

Norm	Designation
DIN ISO 2941	Hydraulic fluid power filter elements; verification of collapse/burst resistance
DIN ISO 2942	Hydraulic fluid power filter elements; verification of fabrication integrity
DIN ISO 2943	Hydraulic fluid power filter elements; verification of material compatibility with fluids
DIN ISO 3723	Hydraulic fluid power filter elements; method for end load test
DIN ISO 3724	Hydraulic fluid power filter elements; verification of flow fatigue characteristics
ISO 3968	Hydraulic fluid power-filters-evaluation of pressure drop versus flow characteristics
ISO 10771.1	Fatigue pressure testing of metal containing envelopes in hydraulic fluid applications
ISO 16889	Hydraulic fluid power filters-multipass method for evaluation filtration performance of a filter element

### 6. Symbols

## 8. Technical specifications

Design:	line mounting filter
Nominal pressure:	400 bar (5690 psi)
Test pressure:	520 bar (7400 psi)
Temperature range:	-10 °C to +120 °C (other temperature ranges on request)
Bypass setting:	$\Delta p$ 7 bar $\pm$ 10 %
Filter head material:	GGG
Filter housing material:	St
Sealing material:	NBR/PTFE
Maintenance indicator setting:	$\Delta p$ 5 bar $\pm$ 10 %
Electrical data of maintenance indicator:	
Maximum voltage:	250 V AC/200 V DC
Maximum current:	1 A
Contact load:	70 W
Type of protection:	IP 65 in inserted and secured status
Contact:	normally open/closed
Cable connection:	M20x1.5

The switching function can be changed by turning the electric upper part by 180° (normally closed contact or normally open contact). The state on delivery is a normally closed contact. By inductivity in the direct current circuit the use of suitable protection circuit should be considered. Further maintenance indicator details and designs are available in the maintenance indicator data sheet.

We draw attention to the fact that all values indicated are average values which do not always occur in specific cases of application. Our products are continually being further developed. Values, dimensions and weights can change as a result of this. Our specialized department will be pleased to offer you advice.

We recommend to contact us concerning applications of our filters in areas governed by the EU Directive 94/9 EG (ATEX 95). The standard version can be used for liquids based on mineral oil (corresponding to the fluids in Group 2 of Directive 97/23 EG Article 9). If you consider to use other fluids please contact us for additional support.

Subject to technical alteration.

- In = Inlet
- Out = Outlet
- \*1 = Visual maintenance indicator
- \*2 = Electrical upper section connector according DIN EN 175301-803, version: PiS 3092, 3105, 3115
- \*3 = Electrical upper section connector according DIN EN 175301-804, version: PiS3102, 3122, 3110
- \*4 = NG 300, 450 with drain screw G $\frac{1}{4}$  DIN 910

DN25 according to SAE1" 6000 psi  
 DN38 according to SAE1½" 6000 psi  
 Flange, screw, o-ring not included in delivery.

## 9. Dimensions

All dimensions except "C" in mm.

Pi 4245 FL			-							18.6

## 10. Execution with reverse flow valve

Filters are normally designed for single-direction flow only. Reverse flows result in destruction of the cartridge. Some applications can require the medium to flow through the filter in both directions, however. The Pi 420 with a reverse flow valve can be used here. It allows medium flows in both directions, although it only filters in one. The liquid is not filtered in reverse mode. The reverse flow valve can be supplied with or without a bypass function.

Filtration mode

Reverse mode

## 11. Installation, operating and maintenance instructions

### 11.1 Filter installation

When installing the filter make sure that sufficient space is available to remove filter element and filter housing. Preferably the filter should be installed with the filter housing pointing downwards.

The maintenance indicator must be visible.

### 11.2 Connecting the electrical maintenance indicator

The electrical indicator is connected via a 2-pole appliance plug according to DIN EN 175301-803 with poles marked 1 and 2.

The electrical section can be inverted to change from normally open position to normally closed position or vice versa.

### 11.3 When should the filter element be replaced?

- Filters equipped with visual and electrical maintenance indicator:  
During cold starts, the indicator may give a warning signal. Press the red button of the visual indicator once again only after operating temperature has been reached. If the red button immediately pops up again and/or the electrical signal has not switched off after reaching operating temperature, the filter element must be replaced after the end of the shift.
- Filters without maintenance indicator:  
The filter element should be replaced after the trial run or flushing of the system. Afterwards follow instructions of the manufacturer.
- Please always ensure that you have original FGC spare elements in stock: Disposable elements (PS) cannot be cleaned.

### 11.4 Element replacement

- Stop system and relieve filter from pressure.
- Filter sizes 300 and 450: empty the filter housing by removing the drain plug.
- Unscrew the filter housing by turning counter-clockwise. Clean the housing using a suitable cleaning solvent.
- Remove element by pulling down carefully.
- Check o-ring, spigot and o-ring in the element locator for damage. Replace, if necessary.
- Make sure that the order number on the spare element corresponds to the order number of the filter name-plate. To ensure no contamination occurs during the exchange of the element first open the plastic bag and push the element over the spigot in the filter head. Now remove plastic bag.
- Oil the threads of the filter housing a little bit and screw into the filter head. Maximum tightening torque for NG 50 to 110 = 60 Nm, for NG 150 to 450 = 100 Nm.
- Check seals of vent drain plug - if necessary, please replace.  
Torque drain plug 30 Nm.

## 12. Spare parts list

Order numbers for spare parts		
Position	Type	Order number
① to ③	Seal kit
